Service Packers**PRODUCT**

Multi-Set ISP

**INNOVEX**

As a temporary solution or a permanent installation, our IPP/ISP products are reliable, efficient tools for zonal isolation in critical oil, gas and geothermal applications. Built to the highest industry standards, Innovex IPP/ISP tools ensure an effective pressure seal and dependable operation.

Versatility is key to optimizing isolation. Tools in standard and customized configurations provide specific solutions – whatever the challenge.

The **Multi-Set Inflatable Service Packer** is used for isolating zones in open-hole or in casing. The tool is re-settable and may be used for testing, treating, production, or injection of several zones with each trip into the well. This tool is designed for long-term downhole production or injection applications.

Features

- Robust mechanical tubing mandrel assembly
- Poppet valve inflation control
- Rotate to release
- Deploy darts for multiple sets
- Inflatable elements available in 4 ft seal lengths
- Cable reinforced elements provide excellent shape memory after multiple sets
- Rated up to 300 F (150 C) applications
